

Automate high-throughput purification and assay of recombinant proteins

Walkaway protein purification and assay setup on the BioRobot® 8000 workstation includes:

- ◆ Cost-efficient Ni-NTA chemistry for medium-scale purification of up to 2 mg 6xHis-tagged protein per well
- ◆ Purification of 96 samples in 150 minutes for high sample throughput and streamlined workflow
- ◆ Highly pure protein suitable for applications such as solubility screening, functional studies, and for rapid definition of crystallization conditions

Contact QIAGEN today and discover automated solutions for your recombinant protein applications
